C & Ku Band Satellite
Signals Received In
U.S. West Coast,
Alaska & Hawaii
Compiled by MIKE KOHL**

Updated Apr 25 2015

128.0 East to 140 West C & Ku-Band

Send correspondence to
globalcm@mhtc.net

Since 1998, I have been providing a free service to the satellite reception community, spending many hours compiling information on free digital signals transmitted via satellite. Recently I have had to make major changes in my life that greatly reduce the amount of time available for such projects. After a major rework to bring information up-to-date, future updates may be limited to once every 3 or 4 months, and we have simplified listings to make updating less time consuming. Most current satellite receivers now have great scanning abilities for finding new signals, so we will include polarity and frequency information along with symbol rates for transponders. Those needing detailed info such as exact PIDs are hereby directed to Lyngsat and other sources. Since I cannot directly view any further east than 30 West, you are also directed to Lyngsat and others for current accurate information about those satellites. As a service to owners of the Manhattan RS-1933 satellite receiver, we will continue to make available a Preloaded Satellite, Transponder and Channel update approximately every 3 or 4 months for \$25.00. Updates can be ordered and will be transferred via Email attachment.
